

Image Agent™

Product Description

Introducing Image Agent, a powerful, integrated image conversion tool for NeXTSTEP Release 3.0.

With Image Agent users can simply drag and drop non-native image files directly into graphic applications, such as Diagram! 2, Concurrence, Pages, and have the images instantly appear. Image Agent transparently performs the image conversion as if it were part of the actual application in use. Additionally, image files from PCs, Macintoshes and Sun Workstations can now be easily imported over a network into NeXTSTEP applications.

Supported image formats include: TIFF, GIF, PS, EPS, TARGA, PICT, MacPaint, PCX, DCX, Windows BMP, MTV, IFF/ILBM, Sun Raster, JPEG (JFIF), XWD, XBM and others.

Image Agent allows NeXT users to share, access and import a wide variety of images from many different computer platforms. Images from other platforms can be effortlessly integrated into page layout, drawing and imaging applications under NeXTSTEP 3.0.

For those requiring more image conversion options, B acchus offers Pixel Magician™, its advanced image conversion application. Pixel Magician provides mass conversion, precise scaling, variable aspect ratios and image resolutions, alpha channel support, dithering, color quantization and flexible output options.

Features and Benefits

- **Drag/Drop** – Non-native images can be dragged and dropped directly into NeXTSTEP applications.
- **Transparent image conversion** – No interface is required. Image Agent performs the conversion as if part of the actual application.
- **Multiple extensions** – Image Agent can recognize many different filename extensions for any given format.
- **Supports a wide variety of image formats** – Formats include: JPEG (JFIF), NeXT FAX, DCX, TIFF, PICT (Raster Only), TARGA, PS, EPS, PCX, Windows BMP, Sun Raster, GIF, IFF/ILBM, MacPaint, XBM, XWD and MTV.

System Requirements

Image Agent requires NeXTSTEP 3.x. A minimum of 16 MB of RAM is recommended.

Ordering Information

Image Agent on 3.5" floppy disk
Single user and Multi-User versions available
USA and Europe

Note: Image Agent is included free with our Pixel Magician product.
