

EPSON

EXTRASCAN™

Scanning Made Simple

GS Corporation's eXTRASCAN takes the guesswork out of scanning. Use it as a stand alone application or call it from the Services menu. Either way, you get perfect scans every time from EPSON ES series scanners. Scan transparencies or reflective art, and load as many as 50 pages at a time with the optional document feeder. eXTRASCAN is remarkably fast for monochrome, grayscale and color images.

eXTRASCAN's Multichoice Panel displays up to three simultaneous versions of your prescan image. Adjust color balance, brightness and contrast—all in real time—and compare them side-by-side with the original. Click on the version you like best, then eXTRASCAN automatically performs the scan using the desired settings. eXTRASCAN even helps you choose the perfect scan resolution for your particular needs. Select an output device from the list of defaults, enter the image reproduction size, and eXTRASCAN automatically calculates the optimum scanning resolution. This ensures maximum image quality with minimum file size.

Combine eXTRASCAN EPSON with eXTRAREAD OCR software to translate scanned documents into fully editable text. From input to output, you can count on GS Corporation for fast, high-quality results.
