

Polaroid  
CI-5000S™

EXTRASLIDE™

# Slides in Minutes

When it comes to making sharp color slides, GS Corporation's eXTRASLIDE CI-5000S means high quality at a low cost. Create slides right from your desktop in as little as two minutes. Featuring the Polaroid CI-5000S film recorder, eXTRASLIDE lets you output at resolutions of up to 4000 lines. Any NEXTSTEP application that prints can print to eXTRASLIDE. Just select the resolution and film type, and eXTRASLIDE rasterizes the image and sends it directly to your film recorder.

eXTRASLIDE integrates seamlessly with NEXTSTEP and allows for easy printing over a network. With NEXTSTEP's Display PostScript Level 2, output is remarkably fast. Simply connect the Polaroid CI-5000S directly to your computer's SCSI port, choose "Print," and in a matter of minutes, you'll have vivid full-color slides of even the most complex artwork.

eXTRASLIDE comes with the Polaroid CI-5000S film recorder, a 35 mm camera back and a Pack Film camera back. A built-in 640K image buffer helps produce exposures quickly, and interchangeable camera backs (sold separately) will output the images on 28 different types of film from 35 mm up to 4" x 5" format. GS Corporation also offers a number of accessory packages for eXTRASLIDE, including automatic film processors, slide mounters, overhead viewers, camera backs, and starter film packs.
