Tailor

Your Key to PostScript[i] Editing

Dear NEXTSTEP user,

How often did you have to retype existing texts or recreate illustrations, just because they happened to be in PostScript format ? You no longer have to : now there is *Tailor* !

With Tailor, you can visually edit PostScript documents, effortless and cleanly - no specialized knowledge required at all. You can cut pieces out of a document and copy them to any other application. Or recover text paragraphs for use in your favorite word processor. And all this regardless of whether the document originated on NEXTSTEP, a PC or a MAC.

Imagine the resulting flexibility and time savings !!

• Update contact information, pricing etc. on data sheets, press releases,...
• Reuse elements from PostScript documents in your reports or presentations
• Fine-tune or enhance business graphics to fit your reports or presentations
• Make last-minute revisions just before you print

Tailor runs on NEXTSTEP 3.0 (NeXT) or 3.1/3.2 (NeXT & Intel 486/Pentium).
A single seat license is $495; educational discount is 50%; site licenses are available.

Please take a look at the brochure, or contact your NEXTSTEP reseller or ourselves for more details.

Yours Sincerely,

Peter Camps
